Which NetSuite Ecommerce Solution is Right for You?

NetSuite offers two ecommerce solutions to fit your business needs. SuiteCommerce is designed to help companies quickly and easily launch a full-featured web store. SuiteCommerce is ideal for organizations that don't need as much customization in their ecommerce experience and have limited IT and development resources. With code-level access, SuiteCommerce Advanced provides developers with the ability to completely customize their site, giving merchants the flexibility to deliver unique shopping experiences.

Key Benefits

- The Commerce Extension Framework works with both SuiteCommerce and SuiteCommerce Advanced, enabling merchants to easily enhance their sites with extensions.
- Site Management Tools make it easy for business users to manage and update content and design for both solutions.
- The same code base and commerce features are offered across both ecommerce solutions.
- Graduate from SuiteCommerce to SuiteCommerce Advanced as your business needs change.
- Ecommerce is natively unified with NetSuite order and inventory management, CRM and ERP.

	SUITECOMMERCE	SUITECOMMERCE ADVANCED
Feature and Functionality Updates	Automatic updates, no versions, no version lock	Manual upgrades
Management of Content and Site Design	Site Management Tools	Site Management Tools
Design Flexibility	Editable themes (HTML and CSS)	Complete control
Commerce Extensions	Commerce Extension Framework enables the creation of pre-built extensions from NetSuite and partners	Commerce Extension Framework enables the creation of pre-built extensions from NetSuite and partners
Modify Core Application Services and Script Libraries	Not supported. Sites can be customized via extensions built on top of the Commerce Extension Framework	Supported, but best practice to ensure easy management of future upgrades is to build customizations as extensions on top of the Commerce Extension Framework
Application Core Code Level Access	Limited to HTML and SASS	Full access to source code, but best practice to ensure easy management of future upgrades is to build customizations as extensions on top of the Commerce Extension Framework
Customized Checkout Flow	Not supported	Supported, but requires code level customization (cannot be done via the Commerce Extension Framework)
Micro-sites (multiple sites)	Not supported	Supported
